General Announcement 2024 – 12
Associated Parts as Inner Cargo

Dear Clients,

In reminder, car parts as inner-cargo in vehicles for AU and NZ must be associated with that particular vehicle.

DAFF definition of Inner Cargo

“loose cargo (parts or additional items) **intrinsically associated** with the vehicle packed inside the boot or the cabin and shipped with the vehicle”

MPI definition of Associated Parts

“An associated part is a part for a vehicle that is **clearly identifiable as being from or for that vehicle, including via make, model, or serial number.**”

If items are found in the vehicles during inspection which do not meet these criteria they will be rejected for shipment.

Non-associated parts must be shipped and biosecurity cleared separately from vehicles.

Thank you for your understanding,

Regards
JEVIC
